## Potassium Metabisulfite Additions:

```
Formula for PMBS addition:
(gallons of wine) x (3.785) x (ppm of addition) = grams of PMBS to add
    (1000) x (0.576)
3.785 is the conversion from gallons to liters
1000 converts \(\mathrm{mg} / \mathrm{L}(\mathrm{ppm})\) to \(\mathrm{g} / \mathrm{L}\)
0.576 is the fraction of \(\mathrm{SO}_{2}\) in PMBS
This formula can be simplified to:
(gallons of wine) x (ppm of addition) \(\mathrm{x}(0.0066)=\) grams of PMBS to add
```

## Preparing a Strong 10\% Stock Solution:

Dissolve 10 grams of Potassium Metabisulfite into 100 mL of water. For additions of sulfite into large lots, use the information provided in the following table.
